

Shipping Integrations

Automate Your EDI and eCommerce Shipping Orders in One System.

Stop the back-and-forth.

STREAMLINE YOUR SHIPPING PROCESS WITH eZCom.

You have your EDI and e-commerce orders all in one place. But now that it's time to ship, you need to get it to UPS/FedEx. Without leaving the Lingo application and shifting to the UPS/FedEx application, you'll be able to prepare labels with the information that's already in your system. What's more, you'll be able to do it in just a few key strokes and without the errors that manual entry can create.

Shipping Labels

- ▶ With Lingo, order information is automatically transferred when you create labels for FedEx and UPS. If you ship to Bed Bath & Beyond with FedEx, you can print one label with both the GS1-128 and shipping information.

Batch Processing

- ▶ Batch create your labels to meet all retailer compliance requirements and reduce your daily label production time by over 80%.

Automation

- ▶ With Lingo, the tracking numbers automatically transfer between documents such as Shipments and Invoices. Lingo also automates tracking information to your ERP and eCommerce platform.
